Baekjoon 1158 요세푸스 문제

linkedList 사용한거

```
import java.util.LinkedList;
import java.util.Scanner;
//public class Main {
public class Baek1158_1 {
  public static void main(String[] args) {
    LinkedList<Integer> l = new LinkedList<>();
    Scanner sc = new Scanner(System.in);
    int N = sc.nextInt();
    int K = sc.nextInt();
    for (int i = 1; i \le N; i++) {
     l.add(i);
    StringBuilder sb = new StringBuilder();
    int idx = 0;
    sb.append("<");</pre>
    while (!l.isEmpty()) {
      idx += (K - 1);
      idx %= l.size();
      sb.append(l.get(idx)).append(", ");
      l.remove(idx);
      if (l.size() != 0)
        idx %= l.size();
    sb.delete(sb.length() - 2, sb.length() );
    sb.append(">");
    System.out.print(sb);
    sc.close();
 }
}
```

배열만 사용한거

```
import java.util.Scanner;
//public class Main {
public class Baek1158_2 {
  public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    int N = sc.nextInt();
    int K = sc.nextInt();
    int[] num = new int[N];
    for (int i = 1; i \le N; i++) {
      num[i - 1] = i;
    StringBuilder sb = new StringBuilder();
    int idx = 0;
    int numLength = num.length;
    sb.append("<");</pre>
    while (numLength != 0) {
     idx += K - 1;
      idx %= numLength;
      sb.append(num[idx]).append(", ");
```

```
for (int i = idx + 1; i < numLength; i++) {
    num[i - 1] = num[i];
}
    --numLength;
if (numLength != 0)
    idx %= numLength;
}
sb.delete(sb.length() - 2, sb.length());
sb.append(">");
System.out.print(sb);
sc.close();
}
```
